

“VICTOR BABES” NATIONAL INSTITUTE OF RESEARCH-DEVELOPMENT IN THE
FIELD OF PATHOLOGY AND BIOMEDICAL SCIENCES
GENERAL MANAGER: ACADEMICIAN LAURENTIU POPESCU

MEDICAL ANALYSIS BULLETIN

Registration no. 151991

Entry date December 19th, 07

Last and first name: MOLDOVAN EMIL

Age 29 years old Sex M

Address: Timisoara

Medical Care Unit: Timisoara Hospital

Diagnosis

Macrocytic Anemia

Recommendation for examinations:

HISTOPATHOLOGY

RESULTS

Histopathology:

Hematogenous marrow with quantitative cellularity in limits corresponding to his age, with the presence of all series. Erytoblastic series easily hypocellular (F/G – 1/6). Rare large groups of erytoblasts with dyserythropoiesis (macrocytosis, erytoblasts with irregular contour), light deviation at granulocitar left, without suggestive hystopathological elements for ALIP, present maturation, light eosinophily, light megakaryocyte hyperplasia, megakaryocytes small in majority, hypolobulated, dispersed and in rare, small groups, perivascular.

NL/Conclusions

HP appearance is compatible with mielodisplasia.

To be interpreted in clinical, cytological context.

Person in charge with the case: Dr. Camelia Dobrea

M.A.P. Adviser

M.A.P. Coordinator Dr. Camelia Dobrea
